Using the Web Camera in Kosmos

Setting the Camera Up

Step 1: Plug the USB cable into one of the USB ports in the front of the computer.

Step 2: Set the camera on top of one of the displays.

Using the Camera: Changing the Camera Preferences

Once the camera has been plugged it, programs like Skype will readily recognize the camera and built-in microphone; you should not have to change any of the settings. If the program you are using does not recognize the camera, please contact Aaron Taveras at / kosmos@humboldt.edu.

On the desktop there is an icon for the Logictech c920 camera. To change preferences like microphone volume and video quality, open the program and look through all the preferences (there are not very many) to find those that you want to change.
